

**ARS®**  
**Air Refreshing System**

## ARS® (Système de rafraîchissement d'air)

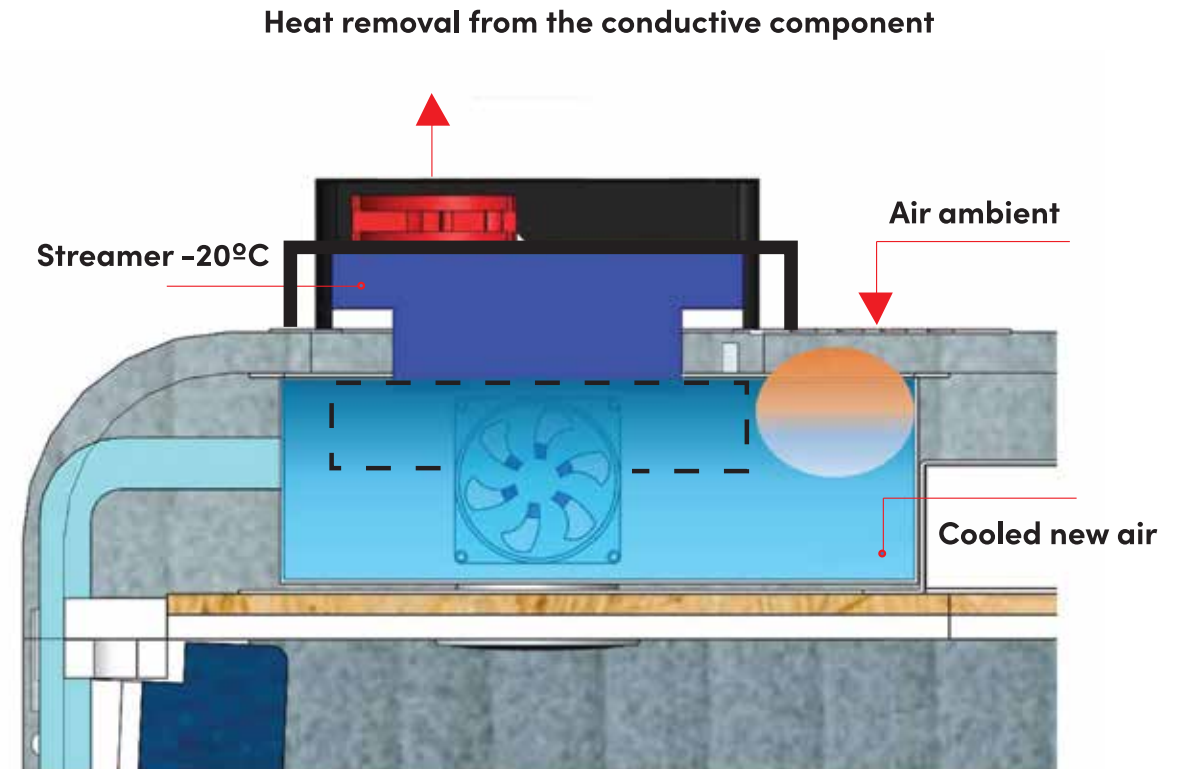

**ARS® (Air Refrigerating System) - PATENTED system**

**AS AN OPTION FOR HELPING TO COOL DOWN THE TEMPERATURE INSIDE THE POD.**

We have developed an autonomous system that uses a thermoelectric effect to cool a component driver. The system, via diffusers, cools an insulated box. Ambient air, outside the box, is triggered into this box using a fan to be cooled by the diffusers. We then use this heat exchange to diffuse fresh air in the box with a temperature lowered by about to 3° degrees.

**The noise generated by this additional system are treated by its own structure, produced dB:13.**
